			ART UNIT	PAPER NUMBER
			2131	

DATE MAILED: 11/02/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/605,060	COLVIN, DAVID S.	
	Examiner	Art Unit	
	Christopher A. Revak	2131	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 05 September 2003.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-100 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-100 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on 05 September 2003 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
 3) Information Disclosure Statement(s) (PTO/SB/08)
 Paper No(s)/Mail Date see attached.
- 4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date. _____.
 5) Notice of Informal Patent Application
 6) Other: _____.

Art Unit: 2131

DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statements submitted are in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-45 of U.S. Patent No. 6,044,471.

Art Unit: 2131

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-45 in that claims 1-45 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

3. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-21 of U.S. Patent No. 6,460,142. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-21 in that claims 1-21 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

4. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,502,195. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-22 in that claims 1-22 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

Art Unit: 2131

5. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,484,264. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-20 in that claims 1-20 of the patent claims all the limitations of claims 1-99 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

6. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-53 of U.S. Patent No. 6,446,211. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-53 in that claims 1-53 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

7. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-40 of U.S. Patent No. 6,799,277. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-40 in that claims 1-40 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not

Art Unit: 2131

patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

8. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,795,925.

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-19 in that claims 1-19 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

9. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,792,548.

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-19 in that claims 1-19 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims; and as such, are unpatentable for obvious-type double patenting.

10. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 6,792,549.

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent

Art Unit: 2131

claims 1-12 in that claims 1-12 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

11. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-126 of U.S. Patent No. 6,813,717. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-126 in that claims 1-126 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

12. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-140 of U.S. Patent No. 6,857,078. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-140 in that claims 1-140 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

13. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-176 of U.S. Patent No.

Art Unit: 2131

6,785,825. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-176 in that claims 1-176 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

14. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-98 of U.S. Patent No. 6,813,718. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-98 in that claims 1-98 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

15. Claims 1-100 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-40 of U.S. Patent No. 6,986,063. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by patent claims 1-40 in that claims 1-40 of the patent claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the earlier patent claims, and as such, are unpatentable for obvious-type double patenting.

Art Unit: 2131

16. Claims 1-100 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-99 of copending Application No. 10/605,061. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by co-pending claims 1-99 in that claims 1-99 of the co-pending claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the co-pending claims, and as such, are unpatentable for obvious-type double patenting.

17. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

18. Claims 1-100 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-86 of copending Application No. 10/605,062. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by co-pending claims 1-86 in that claims 1-86 of the co-pending claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the co-pending claims, and as such, are unpatentable for obvious-type double patenting.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

19. Claims 1-100 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-95 of

Art Unit: 2131

copending Application No. 10/605,063. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by co-pending claims 1-95 in that claims 1-95 of the co-pending claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the co-pending claims, and as such, are unpatentable for obvious-type double patenting..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

20. Claims 1-100 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-88 of copending Application No. 10/605,064. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by co-pending claims 1-88 in that claims 1-88 of the co-pending claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the co-pending claims, and as such, are unpatentable for obvious-type double patenting..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

21. Claims 1-100 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-97 of copending Application No. 10/605,065. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant

Art Unit: 2131

application are envisioned by co-pending claims 1-97 in that claims 1-97 of the co-pending claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the co-pending claims, and as such, are unpatentable for obvious-type double patenting..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

22. Claims 1-100 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-94 of copending Application No. 10/605,067. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-100 of the instant application are envisioned by co-pending claims 1-94 in that claims 1-94 of the co-pending claims all the limitations of claims 1-100 of the instant application. Claims 1-100 of the instant application therefore are not patentably distinct from the co-pending claims, and as such, are unpatentable for obvious-type double patenting..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

23. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2131

24. Claims 1-100 are rejected under 35 U.S.C. 102(b) as being anticipated by Ananda, U.S. Patent 5,495,411.

As per claim 1, Ananda teaches of a method for securing software to reduce unauthorized use, the method comprising providing at least one authorized representative entity installed on or in the user device; obtaining registration information corresponding to at least one user device; generating an authentication code at least partially based on the registration information; associating the authentication code with the software; determining whether a current user device is authorized at least partially based on the authentication code associated with the software and registration information associated with the current user device; and controlling access to the software based on whether the current user device is authorized (col. 3, lines 11-15 & 21-28; col. 4, lines 18-28; and col. 11, lines 9-13).

As per claim 2, Ananda discloses wherein the software is self activating and self authenticating in conjunction with the authorized representative located on or in the user device (col. 10, lines 4-15).

As per claim 3, it is taught by Ananda wherein the software comprises data representing content selected from the group consisting of music, video, an application program, an operating system component, a game, a movie, graphics, watermarked works, a magazine, and a book (col. 1, lines 17-19).

As per claim 4, it is disclosed by Ananda wherein the step of obtaining registration information is performed by the at least one authorized representative entity installed on or in the user device (col. 3, lines 21-29).

As per claim 5, Ananda teaches wherein the step of generating an authentication code is performed by the at least one authorized representative entity installed on or in the user device (col. 11, lines 9-13).

As per claim 6, Ananda discloses wherein the step of obtaining registration information is performed by a remotely located authorized representative entity (col. 1, lines 17-19 and col. 11, lines 61-65).

As per claim 7, it is taught by Ananda wherein the step of generating an authentication code is performed by a remotely located authorized representative entity (col. 11, lines 9-13).

As per claim 8, it is disclosed by Ananda wherein the steps of obtaining, generating, associating, determining, and controlling are performed by a resident authorized representative entity installed on at least one user device (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 9, Ananda teaches wherein registration information associated with the current user device remains within a trusted network associated with the user device (col. 3, lines 16-29).

As per claim 10, Ananda discloses wherein registration information associated with the current user device is not communicated to any third party (col. 3, lines 16-29).

As per claim 11, it is taught by Ananda wherein the steps of obtaining registration information, generating an authentication code, and associating the authentication code are performed prior to transferring the software to the current user device ().

Art Unit: 2131

As per claim 12, it is disclosed by Ananda wherein the steps of obtaining registration information, generating an authentication code, and associating the authentication code are performed concurrent with transferring the software to the current user device (col. 3, lines 16-49 and col. 4, lines 39-48).

As per claim 13, Ananda teaches wherein the steps of obtaining registration information, generating an authentication code, and associating the authentication code are performed following transferring the software to the current user device () .

As per claim 14, Ananda discloses wherein the steps of obtaining, generating, and associating are performed by a remote authorized representative entity (col. 10, lines 8-15).

As per claim 15, it is taught by Ananda wherein the authorized representative entity comprises a hardware device (col. 9, lines 57 through col. 10, line 3).

As per claim 16, it is disclosed by Ananda wherein the hardware device is a computer chip (col. 6, lines 57-63).

As per claim 17, Ananda teaches wherein the hardware device is integral with a CPU (col. 6, lines 57-63).

As per claim 18, Ananda discloses wherein the hardware device is a PC card (col. 6, lines 57-63).

As per claim 19, it is taught by Ananda wherein the hardware device is a microprocessor (col. 6, lines 57-63).

As per claim 20, it is disclosed by Ananda wherein the steps of determining whether a current user device is authorized and controlling access to the software are

performed by the authorized representative entity installed on or in a user device (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 21, Ananda teaches wherein the authorized representative entity comprises software (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 22, Ananda discloses wherein the software is electronically distributed (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 23, it is taught by Ananda wherein the software is transferred to a user device from a computer readable storage medium (col. 3, lines 57-63 and col. 9, lines 35-36).

As per claim 24, it is disclosed by Ananda of further comprising electronically distributing the software to a user (col. 9, lines 35-36).

As per claim 25, Ananda teaches wherein at least one authentication code is distributed with the software (col. 3, lines 11-15).

As per claim 26, Ananda discloses wherein the authentication code corresponds to a group of user devices (col. 3, lines 11-15).

As per claim 27, it is taught by Ananda wherein the authentication code corresponds to a manufacturer of a user device (col. 9, lines 5-6).

As per claim 28, it is disclosed by Ananda wherein the authentication code corresponds to a model of a user device (col. 9, lines 5-6).

As per claim 29, Ananda teaches wherein the authentication code corresponds to a unique user device (col. 3, lines 11-15).

As per claim 30, Ananda discloses wherein the steps of determining whether a current user device is authorized and controlling access to the software are performed by a remotely located authorized representative entity (col. 3, lines 16-49).

As per claim 31, it is taught by Ananda wherein the step of controlling access to the software comprises preventing transfer of at least a portion of the software to the current user device (col. 3, lines 16-49).

As per claim 32, it is disclosed by Ananda wherein the step of controlling access to the software comprises preventing the current user device from utilizing the software (col. 10, lines 13-15).

As per claim 33, Ananda teaches wherein the steps of determining and controlling are at least partially performed by an authorized representative installed on a secondary user device (col. 10, lines 4-15).

As per claim 34, Ananda discloses wherein the steps of obtaining, generating, and associating are at least partially performed by a primary user device and the steps of determining and controlling are performed by a secondary user device (col. 10, lines 4-15).

As per claim 35, it is taught by Ananda of further comprising encrypting the authentication code (col. 9, lines 25-34 and col. 10, line 63 through col. 11, line 8).

As per claim 36, it is disclosed by Ananda of further comprising encrypting the registration information (col. 9, lines 25-34).

As per claim 37, Ananda teaches of further comprising associating an identifier with the software to trigger authentication by an authorized representative entity (col. 10, line 63 through col. 11, line 15).

As per claim 38, Ananda discloses of further comprising securing any means for generating the authentication code after generating the authentication code associated with the software (col. 10, line 63 through col. 11, line 15).

As per claim 39, it is taught by Ananda wherein the steps of obtaining registration information, generating an authentication code, and associating the authentication code are at least partially performed by an authorized representative entity installed on or in a user device, the method further comprising modifying the authorized representative entity to disable subsequent generation of authentication codes associated with the software (col. 10, lines 8-15).

As per claim 40, it is disclosed by Ananda wherein the steps of obtaining registration information, generating an authentication code, and associating the authentication code are at least partially performed by a remote authorized representative prior to distribution of the software (col. 3, lines 16-49).

As per claim 41, Ananda teaches of a method for securing software to reduce unauthorized use having an authorized representative entity installed on or in a user device, the method comprising determining whether the user device is authorized to access the software using the authorized representative entity; and controlling access to the software based on whether the user device is determined to be authorized (col. 3, lines 11-15 & 21-28; col. 4, lines 18-28; and col. 11, lines 9-13).

As per claim 42, Ananda discloses wherein the software is self-authenticating in conjunction with an authorized representative located on or in the user device (col. 10, lines 4-15).

As per claim 43, it is taught by Ananda of further comprising determining whether the user device is authorized to access the software using a remotely located authorized representative entity in combination with the authorized representative entity installed on or in the user device (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 44, it is disclosed by Ananda wherein the authorized representative entity comprises a computer chip (col. 6, lines 57-63).

As per claim 45, Ananda teaches wherein the authorized representative entity is integral with the CPU (col. 6, lines 57-63).

As per claim 46, Ananda discloses wherein the authorized representative entity comprises a PC card (col. 6, lines 57-63).

As per claim 47, it is taught by Ananda wherein the authorized representative entity comprises program instructions executed by a microprocessor (col. 6, lines 57-63).

As per claim 48, it is disclosed by Ananda wherein the program instructions comprise an operating system component (col. 6, lines 57-63).

As per claim 49, Ananda teaches wherein the program instructions comprise an application program (col. 6, lines 57-63).

As per claim 50, Ananda discloses wherein the program instructions comprise a driver for a secondary device (col. 10, lines 4-15).

Art Unit: 2131

As per claim 51, it is taught by Ananda wherein the step of determining whether the user device is authorized comprises comparing registration information associated with the user device to registration information associated with the software (col. 3, lines 16-49).

As per claim 52, it is disclosed by Ananda wherein the registration information associated with the software is embedded within an authentication code (col. 3, lines 24-28).

As per claim 53, Ananda teaches wherein the registration information associated with the software is encrypted (col. 11, line 61 through col. 12, line 14).

As per claim 54, Ananda discloses wherein the registration information includes hardware information (col. 9, lines 5-6).

As per claim 55, it is taught by Ananda wherein the registration information includes hardware information associated with a unique user device (col. 3, lines 11-15).

As per claim 56, it is disclosed by Ananda wherein the hardware information includes a serial number (col. 8, lines 18-23).

As per claim 57, Ananda teaches wherein the registration information includes hardware information associated with a group of user devices (col. 3, lines 11-15).

As per claim 58, Ananda discloses wherein the authorized representative entity is installed by a manufacturer of the user device (col. 9, lines 35-36).

As per claim 59, it is taught by Ananda wherein the authorized representative entity is installed from a computer readable storage medium (col. 6, lines 57-63 and col. 9, lines 35-36).

As per claim 60, it is disclosed by Ananda wherein the authorized representative entity is downloaded to the user device (col. 9, lines 35-36).

As per claim 61, Ananda teaches wherein the authorized representative entity is transferred to the user device from a network (col. 9, lines 35-36).

As per claim 62, Ananda discloses wherein the step of controlling access comprises preventing the software from being transferred to a second user device (col. 10, lines 8-15).

As per claim 63, it is taught by Ananda wherein the step of controlling access comprises preventing the software from being executed by the user device (col. 10, lines 8-15).

As per claim 64, it is disclosed by Ananda wherein the step of controlling access comprises providing limited access to the software (col. 10, lines 8-15).

As per claim 65, Ananda teaches wherein the software comprises data representing content selected from the group consisting of music, video, an application program, an operating system component, a game, a movie, graphics, watermarked works, a magazine, and a book (col. 1, lines 17-19).

As per claim 66, Ananda discloses wherein the software comprises instructions for generating at least one authentication code at least partially based on registration information associated with the user device (col. 11, lines 9-13).

As per claim 67, it is taught by Ananda wherein the software comprises instructions for encrypting the authentication code (col. 9, lines 25-34 and col. 10, line 63 through col. 11, line 8).

As per claim 68, it is disclosed by Ananda wherein the step of determining whether the user device is authorized comprises contacting a remote authorized representative entity if the authorized representative entity installed on or in a user device is unable to determine whether the user device is authorized (col. 10, lines 8-15).

As per claim 69, Ananda teaches wherein the step of determining whether the user device is authorized comprises contacting a remote authorized representative if the authorized representative entity installed on or in a user device determines that the user device is not authorized (col. 10, lines 8-15).

As per claim 70, Ananda discloses wherein the step of determining whether the user device is authorized comprises obtaining registration information associated with the user device; and comparing the registration information associated with the user device with registration information encoded in an authentication code associated with the software (col. 3, lines 22-29 and col. 10, lines 8-15).

As per claim 71, it is taught by Ananda of further comprising detecting an identifier associated with the software to trigger authentication functions performed by the authorized representative entity installed on or in the user device; and performing the steps of determining whether the user device is authorized and controlling access to the software only if the identifier is detected (col. 10, lines 8-15).

As per claim 72, it is disclosed by Ananda of further comprising automatically contacting a remote authorized representative based upon a triggering event to receive information (col. 4, line 61 through col. 5, line 10).

As per claim 73, Ananda teaches wherein the information is selected from a group consisting of updates, upgrades, patches, marketing information, promotional information, quality assurance information, network monitoring and metering information, and error and usage information (col. 20, lines 53-62).

As per claim 74, Ananda discloses wherein the information updates the authorized representative entity installed on or in the user device (col. 20, lines 53-62).

As per claim 75, it is taught by Ananda wherein the information modifies the software (col. 10, lines 8-15 and col. 20, lines 53-62).

As per claim 76, it is disclosed by Ananda wherein the triggering event is based on a user action (col. 3, lines 21-28).

As per claim 77, Ananda teaches wherein the automatic contact with the remote authorized representative is repeated (col. 10, lines 8-15).

As per claim 78, Ananda discloses of a method for reducing unauthorized use of software, the method comprising associating at least one identifier with the software corresponding to a request for digital rights management; distributing the software to a user; detecting the at least one identifier using an authorized representative entity; associating at least one authentication code with the software; determining whether a user device is authorized to access the software; and controlling access to the software

Art Unit: 2131

based on whether the user device is authorized (col. 3, lines 11-15 & 21-28; col. 4, lines 18-28; and col. 11, lines 9-13).

As per claim 79, it is taught by Ananda wherein the software is self-activating and self-authenticating in conjunction with an authorized representative located on or in the user device (col. 10, lines 4-15).

As per claim 80, it is disclosed by Ananda of further comprising encrypting the at least one authentication code (col. 9, lines 25-34 and col. 10, line 63 through col. 11, line 8).

As per claim 81, Ananda teaches of further comprising obtaining registration information associated with at least one user device; and generating the at least one authentication code at least partially based on the registration information (col. 3, lines 21-28).

As per claim 82, Ananda discloses of further comprising encrypting the registration information (col. 11, line 61 through col. 12, line 14).

As per claim 83, it is taught by Ananda wherein the steps of obtaining registration information, generating the at least one authentication code, and associating the at least one authentication code are performed before the step of distributing the software (col. 3, lines 11-31).

As per claim 84, it is disclosed by Ananda wherein the steps of obtaining registration information, generating the at least one authentication code, and associating the at least one authentication code are performed concurrent with the step of distributing the software (col. 3, lines 11-31).

As per claim 85, Ananda teaches wherein the steps of obtaining registration information, generating the at least one authentication code, and associating the at least one authentication code are performed subsequent to the step of distributing the software (col. 3, lines 11-31).

As per claim 86, Ananda discloses wherein the steps of obtaining registration information, generating the at least one authentication code, and associating the at least one authentication code are performed by an authorized representative entity installed on or in the user device (col. 3, lines 11-31; col. 10, lines 4-15; and col. 11, lines 61-65).

As per claim 87, it is taught by Ananda wherein the step of generating the at least one authentication code is performed by an authorized representative entity installed on or in the user device, the method further comprising securing the authentication code to resist user tampering (col. 11, lines 9-13).

As per claim 88, it is disclosed by Ananda wherein the step of securing comprises preventing the authorized representative entity installed on or in the user device from generating any more authentication codes for the software (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 89, Ananda teaches wherein the step of securing comprises encrypting the authentication code (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 90, Ananda discloses of further comprising determining whether an operational authorized representative entity is available locally; installing an authorized representative entity on or in the user device if an operational authorized representative entity is not available locally (col. 10, lines 4-15 and col. 11, lines 61-65).

Art Unit: 2131

As per claim 91, it is taught by Ananda wherein the step of installing comprises transferring the authorized representative entity to the user device from a remote authorized representative entity (col. 10, lines 4-15 and col. 11, lines 61-65).

As per claim 92, it is disclosed by Ananda wherein the step of installing comprises transferring the authorized representative entity to the user device from a computer readable storage medium (col. 6, lines 57-63 and col. 9, lines 35-36).

As per claim 93, Ananda teaches wherein the software includes an authorized representative entity and wherein the step of installing comprises transferring the authorized representative entity to the user device from the software (col. 6, lines 57-63 and col. 9, lines 35-36).

As per claim 94, Ananda discloses of further comprising determining whether an operational authorized representative entity is installed on or in the user device; and contacting a remote authorized representative entity if no operational authorized representative entity is installed on or in the user device (col. 3, lines 22-29 and col. 10, lines 8-15).

As per claim 95, it is taught by Ananda wherein the remote authorized representative entity performs the steps of determining whether a user device is authorized and controlling access to the software (col. 10, lines 8-15).

As per claim 96, it is disclosed by Ananda of further comprising obtaining registration information including hardware specific information associated with a user device, wherein the steps of obtaining registration information and associating at least

one authentication code are performed prior to the step of distributing the software to a user (col. 3, lines 22-29 and col. 10, lines 8-15).

As per claim 97, Ananda teaches of further comprising obtaining registration information including hardware specific information associated with a user device, wherein the steps of obtaining registration information and associating at least one authentication code are performed concurrent with the step of distributing the software to a user (col. 3, lines 22-29 and col. 10, lines 8-15).

As per claim 98, Ananda discloses of further comprising obtaining registration information including hardware specific information associated with a user device, wherein the steps of obtaining registration information and associating at least one authentication code are performed following the step of distributing the software to a user (col. 3, lines 22-29 and col. 10, lines 8-15).

As per claim 99, it is taught by Ananda wherein the step of determining whether a user device is authorized is performed by a hardware device (col. 3, lines 16-49).

As per claim 100, it is disclosed by Ananda wherein the step of controlling access to the software comprises preventing the software from being transferred to the user device if the user device is not authorized (col. 10, lines 8-15).

Conclusion

25. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher A. Revak whose telephone number is 571-272-3794. The examiner can normally be reached on Monday-Friday, 6:30am-3:00pm.

Art Unit: 2131

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on 571-272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
